SMARTBRIDGE
Let's Bridge the Gap

Project Initialization and Planning Phase

Date	20 October 2026
Team ID	Deepika Landge
Project Title	Health360: Comprehensive Healthcare Risk & Disease Analytics
Maximum Marks	3 Marks

Project Proposal (Proposed Solution) template

This project proposal outlines a solution to address a specific problem. With a clear objective, defined scope, and a concise problem statement, the proposed solution details the approach, key features, and resource requirements, including hardware, software, and personnel.

Project Overview	
Objective	To analyze healthcare data and create an interactive Tableau dashboard for understanding patient demographics, lifestyle factors, symptoms, and recorded disease patterns.
Scope	The project covers data cleaning, exploratory analysis, KPI creation, interactive visualizations, and dashboard development using the available healthcare dataset.
Problem Statement	
Description	Healthcare data stored in raw CSV or Excel tables can be difficult to interpret, compare, and summarize manually.
Impact	Manual analysis takes time and makes it harder to identify trends, compare patient groups, and communicate insights effectively.
Proposed Solution	
Approach	Import the healthcare dataset into Tableau, inspect data quality, clean and format fields where required, create calculated fields, analyze relevant variables, and develop an interactive dashboard with filters and charts.
Key Features	Interactive dashboard; patient record count; demographic analysis; lifestyle and symptom analysis; recorded disease distribution; filters for relevant patient attributes; KPI cards; and comparative charts.

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware		
Computing Resources	Computer or laptop for data analysis and dashboard development	Standard laptop with a modern dual-core or better processor
Memory	RAM required to run Tableau and handle the dataset	8 GB RAM recommended; 4 GB may work for a small datase
Storage	Space for dataset, project files, and exported dashboard	Approximately 2–5 GB of free space for project files and software-related needs
Software		
Frameworks	Dashboard development and visualization platform	Tableau Public or Tableau Desktop
Libraries	Tools for supporting data preparation, if required	Microsoft Excel; Python libraries such as Pandas are optional
Development Environment	Environment used to create, test, and publish the dashboard	Tableau Public/Desktop and Microsoft Excel
Data		
Data	Source, size, and format of the dataset	Healthcare dataset in CSV or Excel format; use the actual dataset's row count, column count, and source
