Project Design Phase-II
Solution Requirements (Functional & Non-functional)

Date	20 October 2026
Team ID	Deepika Landge
Project Name	Health360: Comprehensive Healthcare Risk & Disease Analytics
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)	Priority (High/Medium/Low)
1	Data Access & Integration	The system shall import the healthcare datasets from a CSV file into tableau for analysis.	High
2	Data Processing	The system shall identify missing valves, checks duplicate records, verify data-quality issues before analysis.	High
3	Business Analysis	The system shall analyze patient age, gender, BMI, blood pressure, cholesterol, glucose, lifestyle factors, and recorded health conditions.	High
4	Business Insights & Analytical Outputs	The system shall display interactive charts, KPI summaries and visual comparisons of patient health indicators and recorded diseases.	High
5	User Interaction & Analysis	User shall be able to filet and compare healthcare data by available categories such as age group, gender, lifestyle factors and health conditions.	Medium
6	Data Update & Reporting	The system shall allow the datasets to be refreshed when updated data is available and provide dashboards- based reports.	Medium

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	**Usability**	The dashboard should have a simple,clear, and user-friendly interface with understandable charts and filters.
NFR-2	**Security**	Patient data should be handled reasonably and personally identifiable or sensitive information should not be published publicly.

NFR-3	**Reliability**	The dashboard should display consistent results based on the available datasets and validated calculation.
NFR-4	**Performance**	Charts, filters and dashboards interactions should responds smoothly for the 5000-record dataset.
NFR-5	**Availability**	The published dashboard should be accessible when the hosting platform is available and the user has the required access.
NFR-6	**Scalability**	The solution should allow additional healthcare records to be incorporated without redesigning the entire dashboards.
